

Panacea is a registered non-profit organization, **dedicated to educational study and research**. All copyrights belong to their owners and are acknowledged. All the material presented on our web site(s) is either news reporting or information presented for **non-profit study and research**. All information has previously been publicly disclosed and implicitly been put into the public domain. **Fair Use applies.**

**[www.panacea-bocaf.org](http://www.panacea-bocaf.org)**  
**[www.panaceauniversity.org](http://www.panaceauniversity.org)**

Welcome to The Panacea-BOCAF newsletter #10 dated JULY 2010. It would not be a Panacea newsletter without a unique accomplishment to report would it? So let's get straight into YOUR good news.

First of all, Panacea volunteer's Sandeep, Rolf, D and Jules Tresor have been consistently enabling the following achievements to surface. There has never been a counter effort of this magnitude to wake people up and to create the needed infrastructure to focus on our area of objective research.

**We wish to sincerely thank Sandeep, Rolf, D and Jules Tresor. We wish to extend our thanks to all our new and current subscribers. We are grateful to all of our supporters for being the only ones to help achieve what we are about to report.**

We are a team and the communities are bonding, but not without individuals giving us regular [needed donations](#) to produce real time results. These results will be proven in this news letter. These individuals cannot do it alone. However small or slight you think your donation is, without it; we won't be able to continue to help. So please consider that these individuals have done a world of good and that donations WORK. WE are in their debt.

This year more support than ever will be needed to help complete Panacea's educational model on [FREE energy infrastructure](#), [weather engineering](#) and training for fuel saving and pollution reduction retrofit modifications to improve public health. Panacea's educational model is not complete without presenting ALL the educational material to complete self sufficiency.

[Banking reform](#)

[Sustainable development](#)

[Alternative medicine](#)

Panacea is intent on creating an educational institute with the advantage of having the capacity to provide independent validation and security on ALL the subject matter needed for social reform. The center is needed to ensure self sufficient sustainable development education to the public from a centralized hub. Secure and with capacity.

Without Panacea and your support, the general public would not get exposure to ALL this subject matter. Policing free energy is one thing, but self sufficient EDUCATION extends to banking reform and other areas of which Panacea is the only institute with the educational capacity to provide. And this will all be packaged into one SELF EVIDENT presentation for the public. Public demos are coming to ensure this!

This year thanks to sponsorship Panacea acquired a non commercial license to help validate Irish company [Steorn](#)'s FREE energy device. Our disclosure will be public and will reach many people, both in the academic community and abroad. Steorn cannot do the same demo in the same way. Panacea will configure it into an application needed to make the public and faculties find the FREE energy principle "self evident".

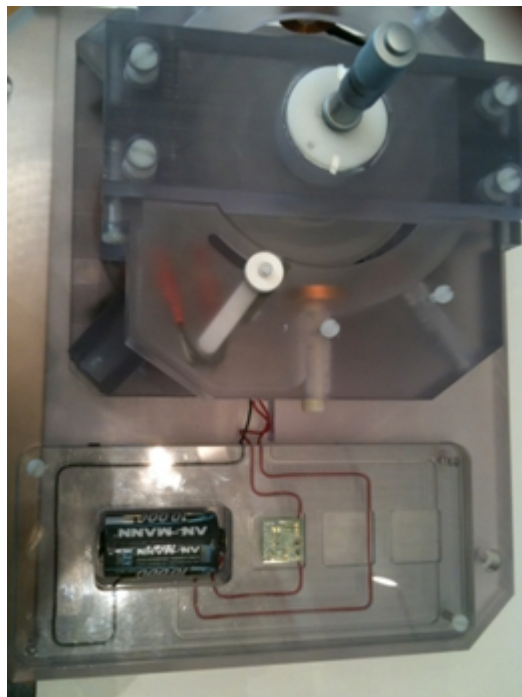

Official Steorn Orbo Kit donated to Panacea

Steorn are coming up with all the information needed to copy exactly what they have shown to be their claim, **so a natural path is to replicate the claim and then move forward to make it better and try to get improved configurations for public applications.**

We cannot plant the concept idea ONLY and expect people to go off and invent off the back of it. It has been tried many times over the years. [Many different people for over 400 years](#) have been claiming OU, (over unity) but the full info was never given to the public. Therefore engineers in the open source FREE energy community spend a lot of time, in fact years on no budget trying to work out their clues and never get a working model.

There has also never been a concept like the Panacea research center to help secure this knowledge and provide the support the inventors to: Prevent their business incompetence, hold the knowledge in a public trust (preventing it from vanishing if they do or go broke) or be in the public eye validating the technology. Building consumer awareness and demand is mandatory to get support for FREE energy technology from the public.

The electromagnetic Orbo Device on display - Photo Courtesy of ESA

With Steorn the difference is that they are in communication with Panacea. They have also enabled developer licenses to the public. Whilst Panacea has other ways to make FREE energy inventors get public access without interference, this has so far been an objective move by Steorn but they need our help to make applicators. The faculties are not interested. For 3 years they have ignored Steorn's technology.

The Orbo Device on display - Photo Courtesy of Esa

Steorn needs an independent validation from a credible source like Panacea to “let the cat out of the bag” to the public. Once our credibility is established through Panacea’s public validation of the device, the public will be more receptive to hearing about other EDUCATIONAL material which ONLY we can present to help make the public LEARN about how to become self sufficient.

**Panacea has already begun filming the Panacea Steorn production. This production will have answers to help the FREE energy community with our solutions to help get the ALL the educational material out to the public in real time.** This production is also to support the open source community and help Steorn.

### **Panacea begins the world first FREE fuel saving and pollution cutting school**

A Scene from the Brisbane Australia class room

This is the first school of its type in history to be started by the open source community. Thanks to donations of equipment and money (which we still need to source) we can now start to get these systems taught.

The government and faculties are not teaching them. It's time to remind everyone that there are [920 patents](#) since the 1920's to improve fuel economy and reduce emissions which have never made it to the public. **Where is the INFERSTRUCTURE to educate them?**

This school will also teach the public about how the SYSTEM needs security and policing through our no profit organization.

Hosted by Panacea this FREE Expo and school will show all the open source and proprietary retro fitting technologies which we have validated. This will SECURE the information and help get systems to the public. We will be presenting all our fuel saving and emissions data for any mechanic or individual to evaluate. **Plus be able to train mechanics and individuals FREE.** This school will be held in Brisbane Australia at the state library please [contact us](#) for any interests. We expect it to start in late 2010.

In the mean time, this information can be obtained by direct us via email. We can send you a fact sheet to be sent all the information. If you are mechanic and can't get to the school please contact us and we can send you an information pack and provide free training. If you a commercial vendor and wish for us to test and show case your technology there please [contact us](#). The following is a current list of technology which we have tested:

- 1) [SPAD -Big diesels and tractors](#)
- 2) [ECOPRA - Diesel car engines](#)
- 3) [HH2 -LPG, petrol and diesel with computers](#)
- 4) [Open source energy saving material](#) we deal with, LED lighting, battery charging and more.
- 5) Free energy - [Steorn](#) and [solar amplifier](#) soon

We won't charge for the class, any supporters can offer a small donation if they wish to support our public service. With more we can provide more it's that simple. Currently we are testing the Gagetman groove, Z5, FVI vaporizer and the HH2 system. We will soon have data on the tractor which Panacea installed the open source SPAD unit on.

Panacea's SPAD installation – Thanks to Mal and Dave

This is a very valuable solution to tractors and big diesels. **Simple retrofitting modifications are the future for real time health benefits.** The following is one small example of how it is mandatory for a car to burn its fuel more efficiency for better results.

*A \$208 [Z5 Retrofit](#) By Israeli Wunderkind Saves Emissions And 40% Gas. If you could spend \$208 on a small device that fitted to your car engine, saving you up to 40 percent on your gas consumption, the earth from pollution, and which also gave your car more power, you'd think it was too good to be true, right?*

Z5 Retrofit modification

*Well this is exactly the promise of a new invention, the Z5, devised by an Israeli teenager Zion Badash when he was only 16. [-Source](#)*

A retrofitting garage or [research centre such as the one which Panacea proposes](#) must hold the knowledge in a public trust for security to be truly SECURE. Knowledge that is mandatory for health benefits and sustainability needs to be secure. We have

already seen Japanese company [Genepax](#) go under and lose their water powered car. This technology *had* profound implications for sustainability on this planet.

[Genepax water powered car](#)

This prototype vehicle ran entirely on water and air. Their technology generated power by supplying water and air to the fuel and air electrodes using a proprietary technology called the Membrane Electrode Assembly (MEA). The secret behind MEA is a special material that is capable of breaking down water into hydrogen and oxygen through a chemical reaction.

Other commercial free energy knowledge or technology can go under the same way. If the company like in the case of Genepax goes broke or cannot raise the resources to get industry to manufacture it then it is lost.

Genepax were up against the big car manufactures, there has already been one case of innovation where the big manufactures caused inference and prevented the technology from success.

Tucker '48 at Petersen Automotive Museum,

You can study the [Tucker case](#) to verify this. Without a corporation charter to ensure renewable industry must be sought over the place of less efficient designs, or even renewable materials (such as hemp) are used there is no security to ensure the technology survives.

Without sponsorship to help them along (such as the Panacea case) the people who have the profit motive will continue have the means to prevent the sustainable alternative through industrial espionage.

These companies and devices [Energy By Motion](#), [Black light power](#) and [Hidro](#) are like Genepax essential engineering knowledge to advance education and have profound implications for sustainability for humanity, yet there is no security for interference or faculty ignorance of the principles.

The EBM device located in their open house lab in Budapest

A retrofitting garage specific (such as Panacea proposes) for this type of technology must be in place publicly as a centralized hub to ensure the consistency in the education of these modifications and free energy technologies. **A retro fitting garage in the public eye specific for all these technologies under a government subsidy scheme to help retrofit them is the only way to ensure everyone gets to know about these in real time.**

You can ask F.M.Chalkalis about where the patent system is at regarding these technologies, and where humanity should be at. The following is a perfect example of how the Panacea infrastructure can produce real time security and support.

[YouTube - F.M.CHALKALIS ENERGY MULTIPLIER](#)

[F.M.CHALKALIS ENERGY MULTIPLIER](#) *A DONATION FOR A BETTER WORLD... We all know about the inexhaustible energy produced by gravity. Through the years a lot of people have tried and are still trying to make use of it, especially nowadays that the energy problems are so serious.*

*I must conclude by saying that if people lived in harmony with nature and paid more attention to its laws and the way it works without "abusing" it, a lot of our problems would have been solved.*

*This innovation is donated to humanity and I'm hoping for your help to make it known and useful to all. -End*

**Panacea will be presenting our pollution cutting data to the mainstream press to show the merit for this case.** We have filmed a new production to help launch this school entitled "Fuel saving and pollution cutting retrofitting modifications". Video editing is now being done; the production will come with the release of a FREE PDF containing our open source results.

The FVI system we are testing for the production

No one else in the world aside from Panacea has gathered all these modifications and is intent on teaching them; **this is done on no budget, only by your donations.** So it gives us great pleasure to welcome you to YOUR unique contributions in making a difference in the world.

On that note, welcome to Newsletter 10, there is more inside to be proud of. Thank you again for reading and your subscription. The next Panacea newsletter will be due in December of 2010.

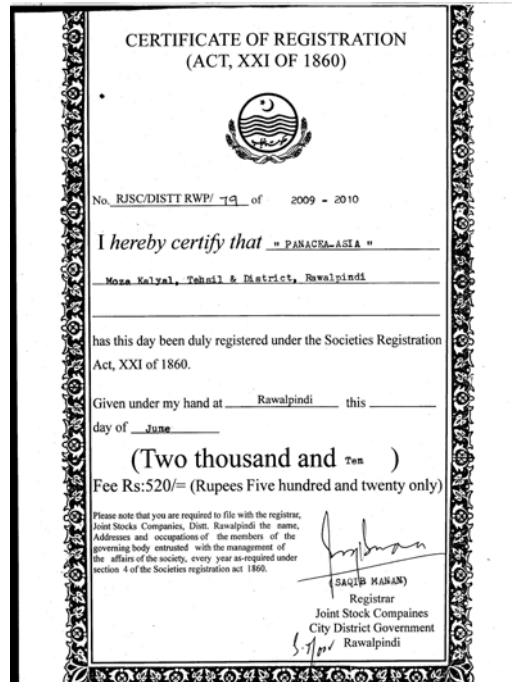

Sincerely – The Panacea' Trustee's.

## Main page news

### Panacea Asia!

It is our great pleasure to report that Abubaker Siddique has volunteered to begin Panacea-Asia out of Pakistan. This will be part of our [overseas divisions](#). Aside from the political situation in Pakistan, there are many below the poverty line. Asia and Pakistan have an educational problem just like we do in the west.

Panacea Asia registration

Abu will be helping disseminate, open source information, installing fuel savers and presenting proof of principles there to help start the infrastructure over in Asia. This page is currently being authored and will be up soon.

### Activism begins! Panacea's help to educate public in banking reform education

Below is a book donated to the Panacea University entitled "Out of the Red & Into the Black!". This has been authored by Panacea volunteer Leonard Clampett. This book goes into great detail on how we can achieve interest and debt free loans. This book is also a sobering reminder on how we have the power to lobby our government to create interest free and debt free currency, **the only way to get out of debt.**

Len Clampett's Book on banking reform

Panacea is currently in talks with individuals who will be planning a public protest gesture to promote the EDUCATION on [Banking reform](#). This is something the general public does not know is possible. This will be on a grand scale, we can't release any more details at this time, please check our news section in the coming months to find out more.

### **What can Panacea do about the Gulf Spill?**

AN EXTRAORDINARY CRISIS REQUIRES AN EXTRAORDINARY RESPONSE – THE PEOPLE MUST ACT TO STOP THE GULF CATASTROPHE.

1 million signatures are needed to help push through a corporation charter to address BP beyond what is being done at this time. We can do it. Class action communities who know how to do mandates have volunteered to use Panacea's signatures to help address this.

It's easy – Name e-mail and country at this link-

<http://www.panacea-bocaf.org/forms/evidenceofconcern.php>

Panacea wishes to extend a special thanks to all who have contributed information and who continue to dig deep to show the extent of BP's negligence. Panacea has profiled this on <http://panacea-bocaf.org/oilsubjugation.htm>

Attacking the source is what we must do, the open source free energy community has a direct way we can do this, and together with a corporation charter we can make sure the renewable energy that's alleged to be sort after by Obama includes our areas of research.

This charter will prevent foreknowledge, insider trading and judges with financial ties to have the ability to approve permits, force insurance and have stricter penalties. **It will also make it mandatory that the renewable solution is to be used over chemicals, the corporation charter cuts the snake off at the head but also makes OUR renewable sustainable education inclusive, this otherwise would be neglected.** One million signatures are possible and the unique EDUCATIONAL contribution the

open source FREE energy community can contribute is attacking the source.

Please help and pass this link around please, it was hard work all of us collecting info  
Its easy - Name e-mail and country is easy at this link

<http://www.panacea-bocaf.org/forms/evidenceofconcern.php>

### New educational video productions

The following is a video preview of the Panacea dirty electricity production. This scene shows the difference in dirty electricity units from using filters which are essential to improve and protect your health.

A dirty electricity meter Scene taken from the production

Panacea also conducted R&D in this production and has improved the process, **we have shown how a combined power saver can be used in conjunction with a dirty electricity filter and achieve power savings and improve health.** This is something neither power savers nor dirty electricity researchers are aware of.

A power saver (left) and a dirty electricity filter (right)

The Panacea dirty electricity production will promote the open source filters and detail how we can improve our health. We will also be doing public demonstrations with the filters, if you know anyone who has access to bio feedback metering please contact us. This production is expected to be finished in a month. Please check our [news section](#).

#### [Dirty Electricity Preview](#)

If the video does not play, we recommend using [VLC](#) media player

Dirty Electricity (DE) affecting the body is valid scientific fact as shown in the mandate for the citizens of Kazakhstan that protects them against DE. (Filters are backed by scientific evidence which has been presented to the World Health Organization.)

This is another reason for power factor correction (even a simple capacitor plug for the wall), Panacea's video production on dirty electricity is part of building the case for the alternative medicine research in part of our proposed granted nonprofit research and development center.

Meters: <http://www.stetzerelectric.com/researchPaper/list>

More on dirty electricity and filters- <http://www.silentfields.com/>

New Video productions are coming later this year covering:

[Alternative medicine](#)

[Banking reform](#)

[Sustainable development](#)

Please check our Chemtrail production how you can help collect rain water for the global rain water collection program that's begun.

[Full playlist- The Panacea Chemtrail production](#)

*Since 1997 to now in 2010, evidence and data continues to be collected by the grass roots movements to show related health and environmental effects from recorded Aerosol chemical spraying (AKA Chemtrails). Proven facts show the difference between condensation or "contrails" vs chemtrails being observed plus the motivation for the aerosol spraying from many patents. Contaminated rain water and other samples have been identified with the elements mentioned in these patents (Barium, aluminum and many others) and are linked to the growing worldwide reported health effects. A new disease has also been identified with related data collected from Chemtrails (Morgellons disease).*

*Today in 2010 when this documentary was made, the Mainstream pop artist Prince joins the press showing the German military, NBC news, and many documentaries in presenting enough FACTs to motivate the public to address these chemtrail phenomena. Governments continue to turn a blind eye. We are needed to create public pressure. Half baked investigations have been discounted in Panacea's production and instead a wide range of community reports and data has been included.*

*These include a concrete plan to set up a global rain water collection program and to recruit private investigators to help track the planes and form a report for the public. A global petition has been created to help create public pressure. Panacea has presented a government lab tested rain water sample showing toxic aluminum and has written records about birds dying. We have spoken at a conference to join the chemtrail's community towards affirmative action. Your input is needed. Chris Carnicom first opened the doors for us with his data, we are ALL now needed to participate or you can forget this issue ever being addressed to capacity. -*

<http://panacea-bocaf.org/chemtrails.htm>

**Always Refresh Pages on the BOCAF site**

PLEASE ALWAYS REFRESH THE PAGES (by pressing the F5 key) WHEN VISITING THE PANACEA SITE, MISTAKES ARE BEING CORRECTED AND NEW CONTENT IS BEING ADDED. Please contact us if you see any mistakes. We appreciate any help and feedback. We are understaffed.

## Panacea University news

Panacea will be validating the new [Bedini solar amplifier system](#), thanks to donations we can use this example to show the public a new discovery and advance education. Without us, the knowledge is not safe, the consumer is none the wiser and neither are the faculties with the commercial disclosure alone of this device.

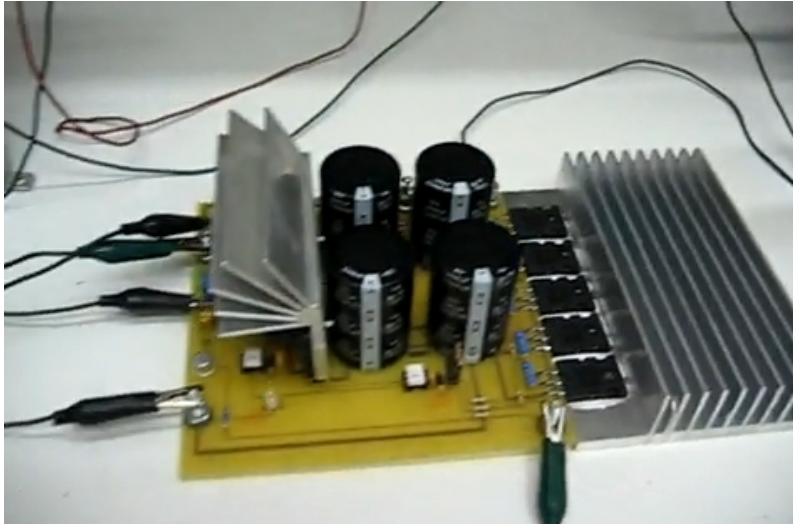

This device was reported to the public by John as being Over Unity. But there is a specific reason why we need to investigate for the public.

A Scene taken from John's OU video which was taken down by John!

In the video's **which have since been removed by John**, the Tesla Switch Solar Charger was shown by John to produce "53 watts in and 148 watts out". **COP= 2.79**

Tesla Switch Solar Charger from Energenx

John Bedini has had a free energy device since the 80's; John first unveiled this publicly with the help of Bill Jenkins Town Hall Meeting in Los Angeles in 1984. John replicated the Kromrey Converter based on Raymond Kromrey's US Patent.

John pictured next to the The Kromrey Converter.

**John is on camera testifying that his manufacturing and production team was rapidly infiltrated and destroyed, and M.I.T. bought up the last remaining twelve operational units from John, never to see the light of day again,** in the energy from the vacuum science series John Bedini's legendary "G-field generator" from the early 1980s in all its glory running on the bench and putting out more power than John is putting in.

And ejecting a stream of freezing cold air from its interior, where one would "normally" expect heat would be produced and dissipated. John shows the motor running under load with the circuit only completed by a strand of wire the diameter of human hair - **impossibility with conventional EM energy.** If John approached the

mainstream ethos with all his findings today would he get the same reaction as Steorn received?

John's Tesla switch battery system is now a commercial product, yet when he posted his video's showing how the device extracts energy from another source (over unity) or as an open system, the company manufacturing it apparently asked him to take them down, as the public will think that the product is a "perpetual motion machine" or "fraud" the same way that Steorn got treated by the economist and others (discredited). We have an educational problem we must address.

**However, did John tone it down by reprogramming it? We will have to find out,** Panacea has his video's saved and on file and will film a replication report, we expect the device to be off the production line in one month.

### Weather engineering tests begin

Thanks to YOUR donations, **Panacea will make our records public showing non compliance by the government to use this CLEAN NON CHEMICAL CHEAP weather engineering technology and not to save the tax payer.** Records continue to be collected by us and have been posted on our [drought relief page](#).

Testing -Trustee Andrew Gardiner

Panacea is currently collecting data for training and consultation to help the farmers around the world. **This technology is now safe in public hands and won't be suppressed any longer.** Our records have shown that the Australian government has no interest in using this technology. We must show the public that the Panacea infrastructure is needed to create social reform. The public must police it and see how the system is not set up to harbor this sort of technology. This year we will be demonstrating this technology to the public via the media.

Thanks to donations what you're looking at is the first INDEPENDENT replication of Trevor James constable etheric rain engineering technology. We can now begin the first ever drought relief program to educate the world. But we are still on no budget.

An air borne Tube to be tested by Panacea

Trevor has always tried to convince the establishment (the same as Reich) on his own. However no one could independently validate his results, Panacea intends to have an institution where this can happen and police the neglect as a public service.

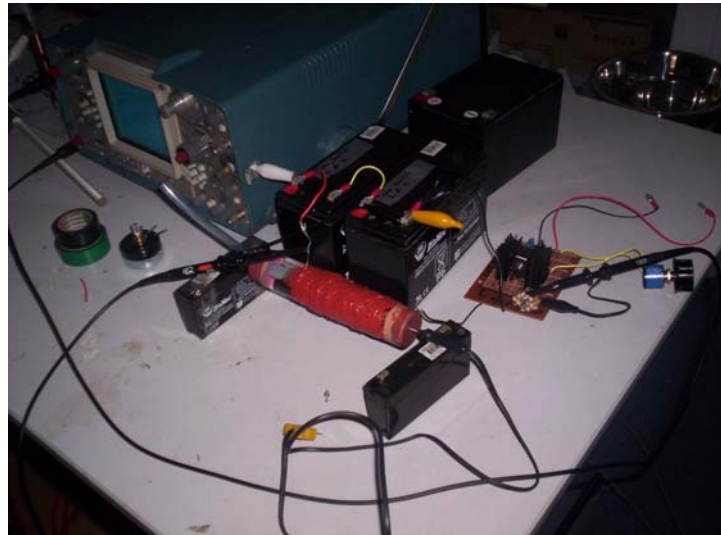

A new Panacea video production has been done containing a complete background of Trevor's accomplishments and proven rain engineering work.

The new production will be entitled ["Trevor James Constable's Etheric Weather Engineering"](#).

**Two open source FREE energy systems are being tested with top equipment**

An individual has made contact with Panacea and offered to collect extensive data from top grade equipment on a few of our open source systems. We will be testing the Rosemary Ainslie heating circuit and the magnetic resonant amplifier. This is being done to support the open source community, Rose and Norman and Joel.

Panacea's Rosemary Ainslie heating circuit

New MRA winding for higher power

We hope to have results to report in the Panacea university documents in a few months. We are committed to open source FREE energy education and advancing FREE energy education in the mainstream faculties. This sort of education will not make its way into the text books any time soon or by ANY other way.

The IEEE paper covering Rosie's technology was completed by collaborators in the open source community and a copy is available in our online university, you are needed to spread this to your local university to help advance education. The IEEE response to the paper was that it was more suited for a physics journal. At this time Rose has her own magnetic field model which must be explored and presented. This physics paper must be written and submitted.

Special thanks to Rose for her open source efforts, plus to open source engineers Glen, Jib and Harvey. Full replication details and this paper which you can forward to your local university have been backed up in the [Panacea Online University course document](#).

### HH2 Tests

Panacea is currently testing the [HH2 hydroxy system](#). This unique hydroxy system separates the hydrogen and oxygen and does not require you to modify the cars on board computer, perfectly legal.

Panacea's HH2 installation

Although the HH2 system is not open source technology, it is one potential hydroxy system which can pave the way for governments to use the technology. This system has CARB approval (a standard recognized worldwide) and currently allows a tax deduction in the USA.

To his credit, Derek, the founder of the HH2 system has pledged to reduce its cost after their initial investment has been recovered. **This in itself is a great victory from our influence to help SPREAD THE TECHNOLOGY to capacity and for public health.**

Panacea has produced an open source gas separator system which was donated by open source engineer Bill Williams; this can be found in the hydroxy document on the Panacea university site. It is our aim to use this example (and our own press and public testing) to help get a similar rebates or tax deductions from other retro fitting modifications and make it cheaper for the public to get them fitted, save energy and reduce pollution (public health benefits).

### GEET furnace and Supplementary car under construction

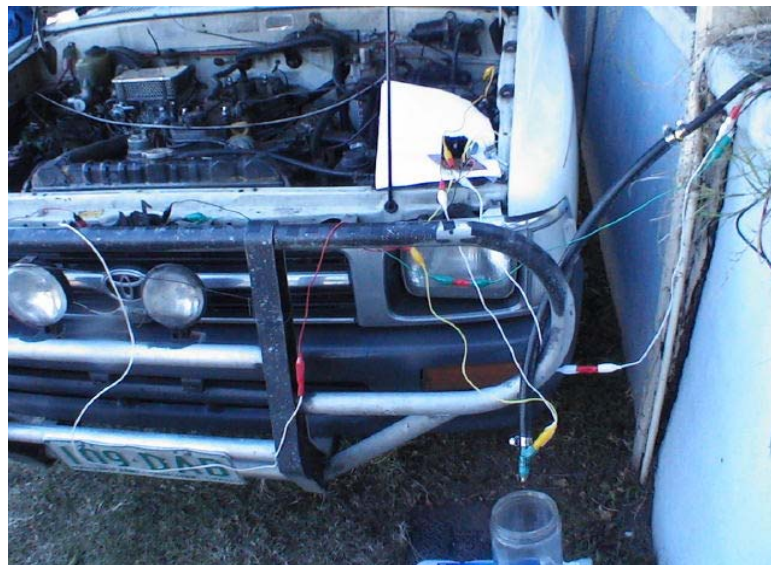

Panacea volunteer Brian has been helping construct the GEET furnace; we are also involved in retrofitting a supplementary GEET car. Upon the completion we can

finally open the GEET School Australia, Panacea wanted to have systems replicated for others to learn, not just teach theory.

GEET furnace

Results are expected to be completed within 2 months, and we hope to be able to commence preparation to start the GEET School Australia and help others. Panacea has also released an open source pulse injector circuit. Below is the prototype:

Panacea's testing on the pulse injector

**Panacea needs you and donations!**

WE cannot survive on a shoe string budget, if you can assist us in any way shape or form [please donate](#).

The proceeds derived from materials offered to the non profit organization are carefully utilized toward various projects to bring about a better future for all. Please help us deliver suppressed and alternative free energy technologies to the public by making a donation.

There are many ways to render assistance towards the reaching of the goals of Panacea-BOCAF. You may, for instance, contribute any ideas or input - let us know of a new website or a replicable project or any such thing. You can also become a volunteer or even offer a donation. For those of you who are not able to use PayPal, it is possible to assist the foundation by mailing any form of assistance to the following address:

Care of Panacea-BOCAF  
150 Lytton RD East Brisbane QLD 4169  
Australia

[www.panacea-bocaf.org/pleasedonate.htm](http://www.panacea-bocaf.org/pleasedonate.htm)

If you are involved in or can help with any of the subject matter presented on [our projects page](#), please contact us for collaborative work. Only united can we all work effectively to stop subjugation. Also we are helping make real changes by [public activism](#). Please sign our petitions; it's as easy as name email and country.

#### A reminder for Security

**To all our new subscribers**- It is Important note that should your news letter not show up and / or the Panacea web site ever be taken down, or anything suspicious like a non response from the nonprofit organization ever occurs - Please email from the link below (save this link). Along with the following text template provided. **Please email the Panacea web site BEFORE hand to double check.**

#### Queensland Police headquarters.

Queensland Police Service Internet Web Site - <http://www.police.qld.gov.au>

*Hello, I am a news letter subscriber of a nonprofit organization at Panacea-bocaf.org. I am sending this email in order to inform you that the nonprofit organization which is engaged in research and development into alternative and suppressed FREE energy technology may have been targeted and or intimidated. Their news letter has not turned up and or there is no response from their web site. As a news letter subscriber this email has been sent as a precaution, I am acting as a deterrent and as a "watch dog" of their operations. Newsletter subscribers have been informed that the nonprofit organization has visited your police station to go on record detailing that they are perusing this research and further that intimidation or interference may possibly occur. Plus they have reported that previous intimidation has occurred to their registered engineers. Therefore we the news letter subscribers are advised that if anything suspicious arises, for the news letter subscriber to send you this concerned email. Please look into the situation immediately. Regards...*

**[Send the Email to this link below - Save this link!](http://www.police.qld.gov.au/Forms/contact.asp)**

**<http://www.police.qld.gov.au/Forms/contact.asp>**

We are happy to report that no suspicious behavior has happened to your nonprofit organization or to any of our open source engineers despite us being involved in this genre of research that threatens the "status quo". The Panacea's trustees would like to personally congratulate you for playing a continued successful security role with your news letter subscription. **Thank you for your critically needed support!** – We look forward to reporting to you in the next newsletter **which is due in December 2010.**

**Please check our [news section](#) on the Panacea-BOCAF site for new video productions coming soon.** The nonprofit organization's volunteers are proud to work for the public and look forward to reporting our public service to you soon!

**Thank you again for your subscription.**

Sincerely,

The trustee's of Panacea-BOCAF.
